

FIRE DETECTOR TESTING POLES

Solo Detector vs VERTIFIER V3 Poles

RECOMMENDED: VERTIFIER V3

SOLO 100 • 4 sections • 4.5 m

VERTIFIER V3 • 7 sections • 9 m

Why the Vertifier is the stronger operational choice

- Greater reach**
9m reach include operator using it, compared with 4.5 m for the Solo 100 alone.
- No add-on extensions**
The 7-section pole reaches 9.18 m without assembling separate Solo 101 extensions
- Lightweight fibreglass material**
2.0kg pole-only weight, with rigid fibreglass material
- Fast, controlled adjustment**
Locking clamps allow quick height adjustments and left/right-handed use compared to modular sections.

COMPARISON	SOLO 100-001	VERTIFIER V3 – 7 SECTION
Pole Material	Fibreglass Material	Glass Fibre Material
Sections	4 Telescopic Sections	7 Telescopic Sections
Extended Pole Length	4.5m Reach	9.18m Reach
Pole Price	Around £410	£493 Ex VAT
Pole Weight	Not Stated	2.0kg
Collapsed Length	1.26–1.30m	1.55m
Extendable Length	Up to 3x Solo 101 Extensions to Reach 9m	No Separate Extensions Poles Required
Clamp/Locking Style	Solo Totalock / Locking System	Positive-Locking Polymer Clamps
Electrical Point	Non-Conductive Fibreglass	Full Glass Fibre Material
Compatibility	Solo / Testfire Accessories	Solo / Testfire & Gas Safe Europe Accessories

KEY TAKEAWAY: For teams regularly testing detectors above 6 m, the Vertifier provides substantially more reach in a single, lightweight telescopic system.
